# Shiprocket as Your Delivery Partner

How it works · How the money flows · How Shiprocket profits · Costs · Feasibility · Step-by-step website integration

**One-line answer:** Shiprocket is **not a courier** — it is a software + aggregation layer. It buys shipping in bulk from 25+ couriers (Delhivery, Xpressbees, Ekart, DTDC, BlueDart, Shadowfax, etc.), resells it to you at a marked-up but still lower-than-retail rate, and gives you one dashboard/API for labels, pickups, tracking, COD and returns. You pay Shiprocket from a **prepaid wallet** per shipment (plus an optional monthly plan); Shiprocket pays the courier and keeps the difference. For a new or small D2C website it is a **feasible and common choice** — as long as your product margin can absorb roughly ₹50–₹120 of shipping per delivered order and you control COD returns (RTO).

## Contents

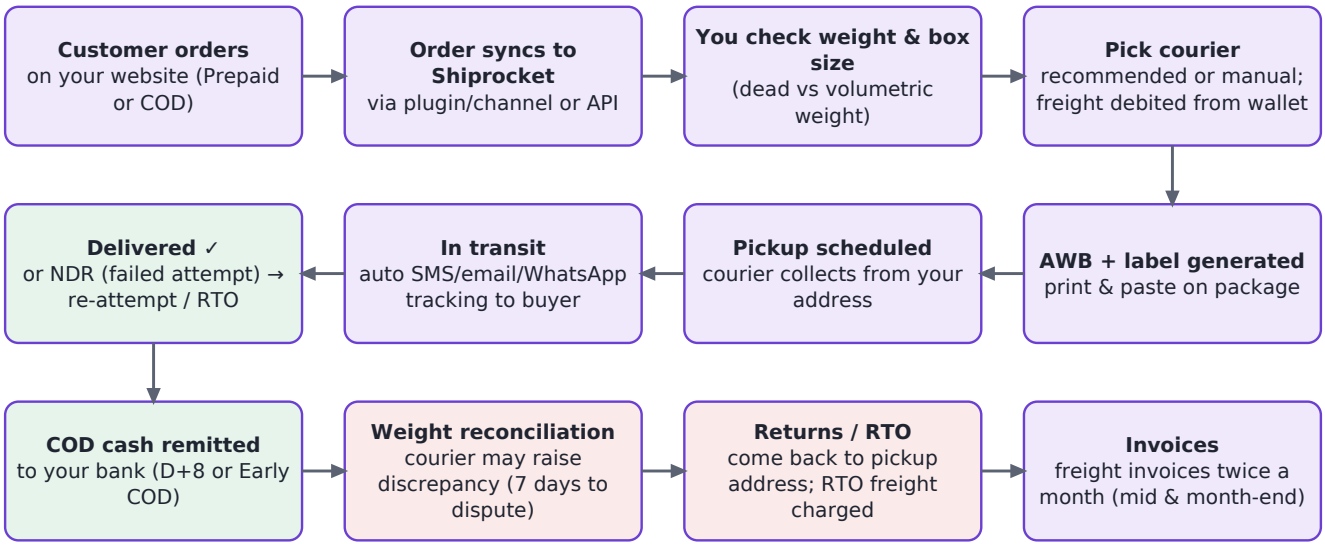

- 1. How Shiprocket works (order-to-delivery flow)
- 2. How the money flows — prepaid vs COD, who pays whom
- 3. How Shiprocket makes money (and is the company profitable?)
- 4. Plans & every charge you will see
- 5. Unit economics: is it feasible for you? (worked example)
- 6. Choosing a plan — break-even math
- 7. Account setup checklist
- 8. Integrating with your website — plugins (Shopify/WooCommerce etc.) or custom API
- 9. Risks, common complaints & how to protect yourself
- 10. Final verdict, go-live checklist & sources

**Note on accuracy:** Plan fees and average rates below were read from shiprocket.in/pricing on 2 Oct 2026. COD fees, Early-COD percentages and per-courier rates vary by courier, zone and weight and change often — always confirm in your panel's *Rate Card* / *Rate Calculator* before you price your products. This is general business information, not financial or legal advice.

# 1. How Shiprocket works

Think of Shiprocket as a ‘travel agent for parcels’. You never sign separate contracts with Delhivery, BlueDart, etc. Instead you connect your store once, and every order is shipped through whichever courier Shiprocket’s recommendation engine (or you) picks based on price, pickup time, delivery speed and past performance on that pincode.

## Order-to-delivery flow

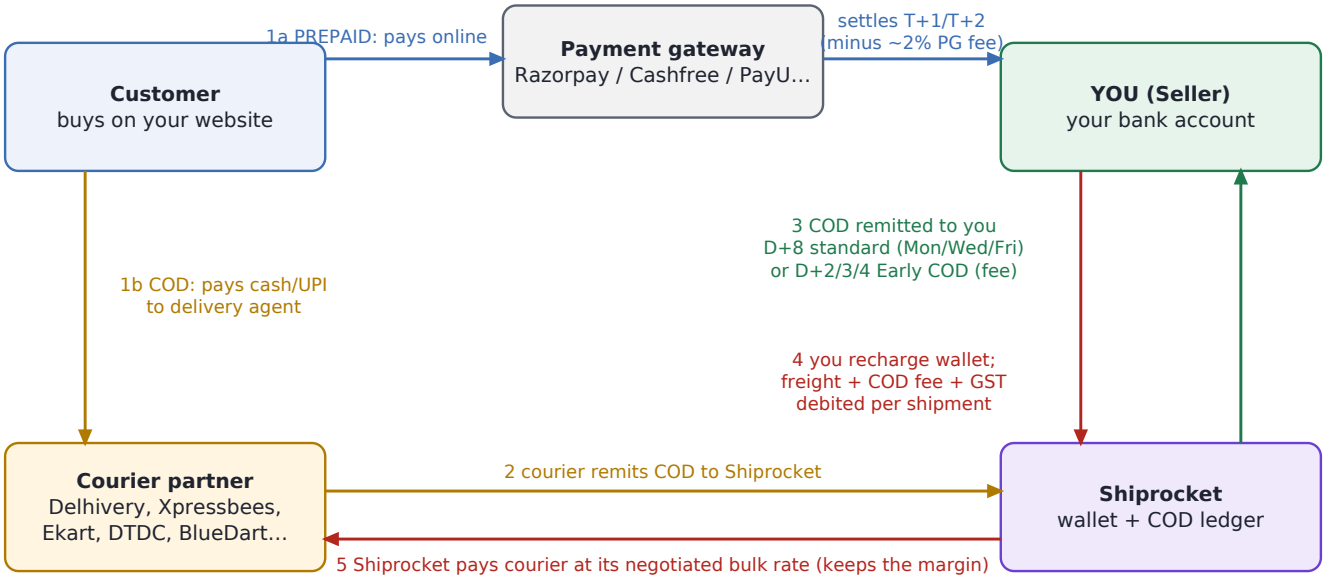

## Key terms you’ll see in the panel

| Term | Meaning |
|---|---|
| **AWB** | Air Waybill — the tracking number the courier assigns to your parcel. |
| **Manifest** | Pickup list handed to the courier agent listing all parcels collected. |
| **Dead / Volumetric / Applied weight** | Actual weight vs (L×B×H in cm ÷ 5000). You are charged on the **higher** one (applied weight), in 500 g slabs. |
| **Zone** | Distance band (within city → within state → metro-to-metro → rest of India → NE/J&K;). Further zones cost more. |
| **NDR** | Non-Delivery Report — delivery attempt failed (customer unavailable, refused, wrong address). You or the buyer choose re-attempt or return. |
| **RTO** | Return to Origin — undelivered parcel sent back to you. You pay forward freight **and** return freight; the COD fee is reversed. |
| **Wallet / Passbook** | Prepaid balance from which every charge is debited; the passbook shows each debit/credit. |
| **COD remittance** | Transfer of collected cash-on-delivery money from Shiprocket to your bank. |

# 2. How the money flows — who pays whom

There are two completely separate money streams. Mixing them up is the most common confusion for new sellers:

- **Stream A — your sales money** (the product price) comes *to you*: directly from your payment gateway for prepaid orders, or via the courier → Shiprocket → you for COD orders.
- **Stream B — your shipping cost** goes *from you* to Shiprocket, debited from your prepaid wallet at the moment you assign a courier. Shiprocket then pays the courier.

## COD remittance options

| Option | When money reaches you | Fee | Best for |
|---|---|---|---|
| **Standard COD** | D+8 working days after delivery; paid out Mon/Wed/Fri → realistically within ~10 working days | Free | Sellers with enough working capital |
| **Early COD D+4** | 4 days after delivery | 0.49% of COD amount (incl. GST) | Mild cash-flow help |
| **Early COD D+3** | 3 days after delivery | 0.69% | — |
| **Early COD D+2** | 2 days after delivery | 0.99% | Tight cash flow, fast-moving stock |
| **Instant COD** | Up to 70% of COD value the day after **shipping**; rest per your plan | ~5% on the advanced portion | Emergencies only — expensive |
| **Postpaid** | COD is held as shipping credit instead of a bank payout | — | Avoid wallet recharges; uninterrupted shipping |

## How a single COD order of ₹999 actually settles (illustrative)

| Day | Event | Your wallet | Your bank |
|---|---|---|---|
| Day 0 | Assign courier: freight ₹41 + COD fee ₹36 + 18% GST = ₹90.86 debited | −₹90.86 | — |
| Day 4 | Delivered; customer pays ₹999 cash/UPI to agent | — | — |

| Day | Event | Your wallet | Your bank |
|---|---|---|---|
| ~Day 14 | Standard remittance (D+8 working days, next Mon/Wed/Fri) | — | +₹999 |
| (alt) Day 6 | With Early COD D+2: ₹999 − 0.99% (₹9.89) | — | +₹989.11 |
| If RTO | Return freight (~₹41 + GST) debited; COD fee ₹36 (+GST) reversed; no ₹999 | −₹48.38, +₹42.48 | ₹0 |

Figures use Shiprocket's published Business-plan average (₹41) and its own help-centre example of a ₹36 fixed / 2.5% COD fee (whichever is higher). Your actual courier and zone rates will differ.

# 3. How Shiprocket makes money

Shiprocket uses a **consumption-based (pay-per-use)** model: its revenue grows with every parcel you ship. Analysts note that Shiprocket bills the merchant for the whole shipment and then pays the courier — so its reported revenue includes the freight it passes through, and its actual profit is the spread plus fees.

| Revenue stream | How it works | Who pays |
|---|---|---|
| **1. Freight margin (biggest)** | Buys courier capacity at bulk, volume-negotiated rates (millions of parcels/month) and resells per shipment at a higher rate that is still below what a small seller would get going direct. | You, per shipment (wallet debit) |
| **2. COD handling fee** | Fixed amount or % of order value (whichever higher) on every COD parcel; part goes to the courier, part is margin. | You, per COD shipment |
| **3. Subscription plans** | Business ₹199 / Advanced ₹499 / Pro ₹799 per month for lower per-shipment rates and better support (refunded if you hit volume targets). | You, monthly |
| **4. Early / Instant COD fees** | 0.49–0.99% for faster payouts; ~5% for Instant COD. Effectively short-term financing of your own cash. | You, % of COD |
| **5. Value-added services** | Fastrr checkout, branded tracking, NDR/RTO tools, WhatsApp comms, insurance/secure shipment, packaging, Promise (delivery date badges), Sense APIs. | You, per use / plan |
| **6. Fulfilment & cargo** | Warehousing, pick-pack, B2B cargo, hyperlocal (Quick), cross-border (ShiprocketX). | You, per order / storage |
| **7. Capital (lending)** | Connects merchants to lenders using their shipping data; earns commission per disbursement. | Lending partner |
| **8. Float & charges** | Holds prepaid wallet balances and COD for days; also passes on weight-discrepancy and RTO charges. | Indirect |

## Is Shiprocket itself financially stable?

| Metric | Figure | Comment |
|---|---|---|
| **Revenue from operations FY24 → FY26** | ₹1,316 cr → ₹2,024 cr | Steady ~24% CAGR |
| **Core business (domestic shipping) FY26** | ₹1,485 cr (≈73% of revenue) | The part you'd be using |
| **Core business adjusted EBITDA FY26** | ≈₹187 cr | Core shipping is profitable |
| **Company net result FY26** | Net loss ≈₹79 cr | Losses come from newer bets (cross-border, quick commerce, etc.) |
| **Scale** | ~250,000 merchants; 200M+ shipments/yr (analyst estimate) | Large enough to negotiate courier rates |

| Metric | Figure | Comment |
|---|---|---|
| **Listing** | IPO in Aug 2026 | Public disclosures → more transparency |

**What this means for you:** Shiprocket’s profit comes mostly from the spread on your freight and COD fees, so its incentive is volume, not cheapness for you. At low volume it is usually still cheaper and far simpler than a direct courier contract. Once you cross a few thousand shipments a month, it becomes worth negotiating custom rates with Shiprocket (Enterprise) or a direct courier contract.

# 4. Plans & every charge you will see

## Domestic shipping plans (shiprocket.in/pricing, 2 Oct 2026)

| Plan | Monthly fee | Avg. shipment cost* | Designed for | Plan-fee refund | Extras |
|---|---|---|---|---|---|
| **Lite** | Free | ₹45 | Up to 5 orders/month | — | Standard rates, basic courier selection, standard support |
| **Business** | ₹199 | ₹41 | 5–50 orders/month | Ship 100 in a month | Better rates, optimised courier selection, guided support |
| **Advanced** | ₹499 | ₹39 | 50–200 orders/month | Ship 500 in a month | Proactive optimisation, dedicated support |
| **Pro** | ₹799 | ₹36 | High volume | Ship 1,000 in a month | Best rates, priority ticket resolution |
| **Enterprise** | Custom | Negotiated | Large brands | — | Talk to sales |

*Shiprocket's headline average for a typical light parcel; real cost depends on weight slab, zone, courier and COD. All plans include: 25+ couriers, labels & manifests, automated tracking, channel & catalogue sync, rate calculator, bulk processing, email/SMS notifications, multiple pickup locations, COD reconciliation and passbook. Sign-up offer seen on the site: recharge ₹500 and get ₹1,000 in wallet with code FLAT500 (first recharge, T&C; apply).

## All the charges that can hit your wallet

| Charge | When | How it's calculated / tip |
|---|---|---|
| **Forward freight** | On courier assignment | Rate per 500 g slab × applied weight × zone. Reversed if you cancel before pickup. |
| **COD fee** | COD orders | Fixed ₹ or % of order value — whichever is higher (example in SR help centre: ₹36 or 2.5%). Reversed on RTO. |
| **GST 18%** | On all of the above | Claim as input tax credit if you are GST-registered. |
| **Fuel / other surcharges** | Some couriers | Built into rate card; check courier-wise breakdown. |
| **Excess weight charge** | After courier re-weighs | Difference is put on hold; you have **7 days** to dispute with photos, otherwise auto-accepted and debited. |
| **RTO freight** | Undelivered parcel returns | Usually ≈ forward freight. Biggest hidden cost for COD-heavy stores. |
| **RTO excess weight** | If returned parcel is re-weighed higher | Same dispute process. |
| **Early/Instant COD fee** | If enabled | 0.49–0.99% / ~5% of COD amount. |
| **Add-ons** | If enabled | Secure shipment/insurance, WhatsApp/brand tracking, Fastrr checkout, packaging, etc. |

## Volumetric weight — the #1 surprise

Volumetric weight (kg) = Length × Breadth × Height (cm) ÷ 5000. A 400 g T-shirt in a 30×25×10 cm box = 1.5 kg volumetric, so you pay for 1.5 kg (three 500 g slabs), not 0.5 kg. Use the smallest box/poly-mailer that fits, and enter the **box** dimensions — not product dimensions — when creating the order.

# 5. Unit economics — is it feasible for you?

The real question is not ‘what does one shipment cost’ but ‘what does shipping cost me **per order that is actually delivered and paid for**’. RTOs on COD orders are what make or break small Indian D2C stores.

Assumptions: product price ₹999, 0.5 kg packed, Business-plan average freight ₹41, COD fee ₹36 (₹36 or 2.5%, higher), GST 18%, RTO freight ≈ forward freight. Prepaid RTO assumed 2%.

| Scenario | Cost if delivered | Cost if RTO | Expected cost per shipment | Shipping cost per DELIVERED order | % of ₹999 |
|---|---|---|---|---|---|
| **Prepaid** | ₹48.38 | ₹96.76 | ₹49.35 | ₹50.35 | 5.0% |
| **COD, 10% RTO** | ₹90.86 | ₹96.76 | ₹91.45 | ₹101.61 | 10.2% |
| **COD, 20% RTO** | ₹90.86 | ₹96.76 | ₹92.04 | ₹115.05 | 11.5% |
| **COD, 30% RTO** | ₹90.86 | ₹96.76 | ₹92.63 | ₹132.33 | 13.2% |

## Simple profit check per order (₹999 product, 20% COD RTO)

| Line | Prepaid order | COD order |
|---|---|---|
| Selling price | ₹999 | ₹999 |
| Product cost (example 40%) | −₹399.60 | −₹399.60 |
| Packaging (example) | −₹15.00 | −₹15.00 (+ lost on RTOs, ignored) |
| Payment gateway ~2% | −₹19.98 | ₹0 |
| Shipping per delivered order | −₹50.35 | −₹115.05 |
| **Contribution before marketing** | **₹514.07** | **₹469.35** |

**Feasibility rule of thumb:** Shipping via Shiprocket is very workable for products priced roughly **₹500 and above** with healthy margins (40%+). Below ~₹400, a ₹90–₹115 per-delivered-order COD cost can wipe out your margin — push prepaid (small prepaid discount), add a ₹30–₹50 COD fee, set a minimum order value for COD, or offer free shipping only above a threshold.

## Levers that improve your numbers

- **Reduce RTO:** confirm COD orders via WhatsApp/IVR before shipping; block repeat-refuser pincodes/phones; use NDR automation so buyers can reschedule.
- **Nudge prepaid:** ₹20–₹50 off or faster dispatch for prepaid; partial-COD (small advance) for high-value items.
- **Cut weight slabs:** right-size packaging; stay just under 0.5 kg / 1 kg boundaries.
- **Pick by performance, not just price:** the cheapest courier with high RTO in a region costs more overall.
- **Upgrade plan only when the math says so** (next section).

# 6. Choosing a plan — break-even math

Using Shiprocket's published average shipment costs, a paid plan pays for itself when the per-shipment saving × monthly shipments ≥ the plan fee:

| Monthly shipments | Lite (₹0) | Business (₹199) | Advanced (₹499) | Pro (₹799) | Cheapest |
|---|---|---|---|---|---|
| 10 | ₹450 | ₹609 | ₹889 | ₹1,159 | **Lite** |
| 30 | ₹1,350 | ₹1,429 | ₹1,669 | ₹1,879 | **Lite** |
| 50 | ₹2,250 | ₹2,249 | ₹2,449 | ₹2,599 | **Business** |
| 100 | ₹4,500 | ₹4,100 | ₹4,399 | ₹4,399 | **Business** |
| 150 | ₹6,750 | ₹6,150 | ₹6,349 | ₹6,199 | **Business** |
| 300 | ₹13,500 | ₹12,300 | ₹12,199 | ₹11,599 | **Pro** |
| 500 | ₹22,500 | ₹20,500 | ₹19,500 | ₹18,799 | **Pro** |
| 1000 | ₹45,000 | ₹41,000 | ₹39,000 | ₹36,000 | **Pro** |
| 3000 | ₹135,000 | ₹123,000 | ₹117,000 | ₹108,000 | **Pro** |

Total monthly shipping spend = shipments × average cost + plan fee (fee treated as refunded when the plan's monthly shipment target is met). Averages exclude COD fees/GST, which are similar across plans.

| Your stage | Suggested plan | Why |
|---|---|---|
| **Testing / first orders (< 50/month)** | Lite (free) | No fixed cost; use the FLAT500-type first-recharge offer. |
| **50–150 orders/month** | Business ₹199 | Saves ₹4/shipment vs Lite → pays for itself at ~50 shipments; fee refunded at 100. |
| **150–1,000 orders/month** | Advanced ₹499 | Beats Business above ~150/month; fee refunded at 500; dedicated support helps with disputes. |
| **1,000+ orders/month** | Pro ₹799 → then negotiate Enterprise | Lowest published average; fee refunded at 1,000. At this scale ask for custom rates. |

# 7. Account setup checklist

| # | Step | Where / notes |
|---|---|---|
| 1 | Sign up | app.shiprocket.in — email + mobile. No credit card, no lock-in. |
| 2 | Complete KYC | Individual or company KYC (ID/PAN; GSTIN if registered). Required before wallet/shipping is fully enabled. |
| 3 | Add bank account | For COD remittance. Double-check IFSC and name match — wrong details delay payouts. |
| 4 | Add pickup address(es) | Settings → Pickup Addresses. Note the exact pickup location **name** — the API needs it. |
| 5 | Recharge wallet | Start small (₹500–₹2,000). Apply first-recharge coupon if available. |
| 6 | Choose plan | Settings/Plans — start on Lite or Business (see section 6). |
| 7 | Set defaults | Default package dimensions & weight, courier priority (cheapest / fastest / best-rated / custom), COD on/off. |
| 8 | Connect your website | Channels (plugin) or API user — section 8. |
| 9 | Branding | Upload logo; set up branded tracking page and buyer notifications. |

| # | Step | Where / notes |
|---|---|---|
| 10 | Test | Place one prepaid + one COD test order, ship to a friend, confirm tracking & remittance. |

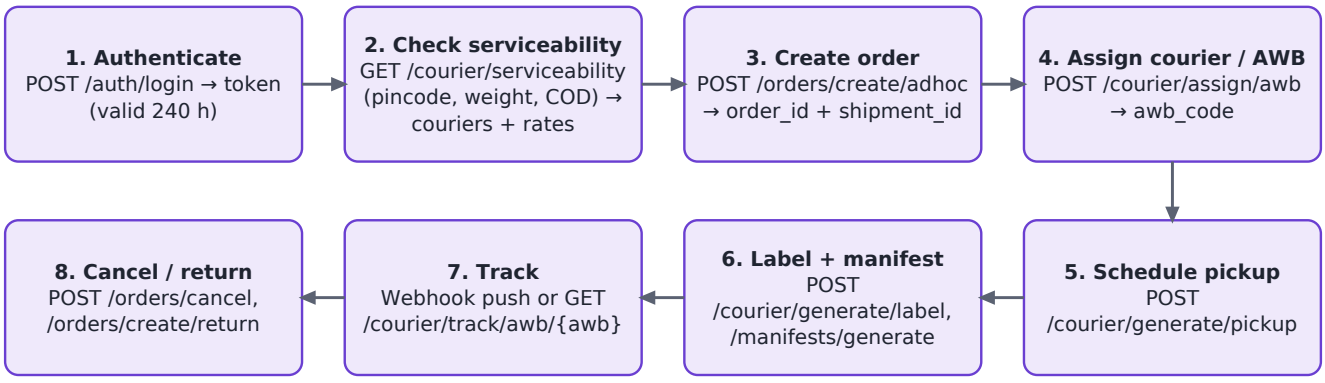

# 8. Integrating Shiprocket with your website

Pick the path that matches how your site is built:

| Your site is on… | Integration method | Effort | What you get |
|---|---|---|---|
| **Shopify** | Install the Shiprocket app from Shopify App Store, or Shiprocket panel → Channels → Add Shopify | ≈15 min, no code | Auto order sync, fulfilment & tracking pushed back to Shopify |
| **WooCommerce (WordPress)** | Shiprocket panel → Channels → WooCommerce (generate Woo REST API keys, paste in panel); optional Shiprocket WP plugin | ≈20–30 min | Order sync, status update to Woo |
| **Magento, OpenCart, Wix, BigCommerce, Zoho, Amazon, etc.** | Panel → Channels → choose your platform (see shiprocket.in/channel-integrations) | ≈30 min | Order sync |
| **Custom site (React/Node, PHP/Laravel, Django, etc.)** | Shiprocket REST API (below) + webhooks | 1–3 developer days | Full control: pincode check at checkout, live rates, auto-ship, tracking page |
| **No website yet / low volume** | Add orders manually or by CSV in the panel | None | Good for testing |

## Custom API integration — sequence

Base URL: **https://apiv2.shiprocket.in/v1/external**. All calls except login need the header `Authorization: Bearer <token>`. Create a dedicated API user in **Settings → API → Configure → Create API User** (use an email that is *not* your main login).

## Where each call fits in your website

| Your website moment | Shiprocket call | Purpose |
|---|---|---|
| **Product page / checkout pincode box** | GET /courier/serviceability/?pickup_postcode=…&delivery;_postcode=…&weight;=…&cod;=1 | Show ‘Delivers by <date>’, hide COD where unavailable, show shipping fee |
| **Order placed & paid (or COD confirmed)** | POST /orders/create/adhoc | Push order to Shiprocket; store returned order_id & shipment_id in your DB |

| Your website moment | Shiprocket call | Purpose |
|---|---|---|
| **Admin clicks 'Ship' (or automatically)** | POST /courier/assign/awb (+ courier_id, optional) | Get AWB; wallet is debited here |
| **Same step** | POST /courier/generate/pickup, /courier/generate/label | Schedule pickup; download label PDF to print |
| **Customer 'Track order' page** | Webhook updates (recommended) or GET /courier/track/awb/{awb} | Show live status without polling too often |
| **Customer cancels before dispatch** | POST /orders/cancel {"ids": [order_id]} | Freight reversed to wallet |
| **Customer requests return** | POST /orders/create/return | Reverse pickup |

## Sample code (Node.js, server-side only)

Never call Shiprocket from the browser — your API credentials would be exposed. Keep calls on your backend and cache the token (it is valid for 240 hours / 10 days; refresh it before it expires).

```
// npm i axios   — env: SR_EMAIL, SR_PASSWORD
const axios = require('axios');
const SR = axios.create({ baseURL: 'https://apiv2.shiprocket.in/v1/external' });
let token = null, tokenAt = 0;

async function auth() {
  if (token && Date.now() - tokenAt < 9 * 24 * 3600e3) return token; // refresh after ~9 days
  const { data } = await SR.post('/auth/login',
    { email: process.env.SR_EMAIL, password: process.env.SR_PASSWORD });
  token = data.token; tokenAt = Date.now(); return token;
}
const H = async () => ({ headers: { Authorization: `Bearer ${await auth()}` } });

// 1) Checkout: is this pincode serviceable, and what does it cost?
async function serviceability(deliveryPin, weightKg, isCod) {
  const { data } = await SR.get('/courier/serviceability/', { ...(await H()),
    params: { pickup_postcode: '560001', delivery_postcode: deliveryPin,
              weight: weightKg, cod: isCod ? 1 : 0 } });
  return data.data.available_courier_companies;   // rate, etd, courier_company_id ...
}

// 2) After order is placed
async function createOrder(o) {
  const body = {
    order_id: o.id, order_date: o.date,              // 'YYYY-MM-DD HH:mm'
    pickup_location: 'Primary',                      // EXACT name from panel
    billing_customer_name: o.firstName, billing_last_name: o.lastName,
    billing_address: o.address, billing_city: o.city, billing_pincode: o.pin,
    billing_state: o.state, billing_country: 'India',
    billing_email: o.email, billing_phone: o.phone,
    shipping_is_billing: true,
    order_items: o.items.map(i => ({ name: i.name, sku: i.sku,
                                     units: i.qty, selling_price: i.price })),
    payment_method: o.cod ? 'COD' : 'Prepaid',
    sub_total: o.total,
    length: 25, breadth: 20, height: 5, weight: 0.45 // PACKED box, cm / kg
  };
  const { data } = await SR.post('/orders/create/adhoc', body, await H());
  return data;                                       // { order_id, shipment_id, ... }
}

// 3) Ship it
async function ship(shipmentId, courierId /* optional */) {
  const awb = await SR.post('/courier/assign/awb',
    { shipment_id: shipmentId, courier_id: courierId }, await H());
  await SR.post('/courier/generate/pickup', { shipment_id: [shipmentId] }, await H());
  const label = await SR.post('/courier/generate/label', { shipment_id: [shipmentId] }, await H());
  return { awb: awb.data.response.data.awb_code, labelUrl: label.data.label_url };
}

// 4) Tracking
```

```
async function track(awb) {
  const { data } = await SR.get(`/courier/track/awb/${awb}`, await H());
  return data.tracking_data;
}
```

Field names follow Shiprocket's public API docs and widely used SDKs; always verify the current request/response schema at **apidocs.shiprocket.in** before going live. Ready-made SDKs exist for PHP/Laravel (e.g. seshac/laravel-shiprocket-api) and Go.

### Database fields to store per order

sr_order_id · sr_shipment_id · awb_code · courier_name · shipping_charged · sr_status · label_url · pickup_scheduled_at · delivered_at · rto_flag · cod_remitted (yes/no + UTR)

### Webhooks (recommended)

Configure in **Settings → API → Webhooks**: give Shiprocket a HTTPS URL on your server (e.g. /webhooks/shiprocket) and a security token. Shiprocket will POST status changes (picked up, in transit, out for delivery, delivered, NDR, RTO) so you can update your database and email/WhatsApp the buyer — no polling needed. Verify the token header on each request and respond 200 quickly.

## 9. Risks, common complaints & how to protect yourself

Shiprocket is widely used, but public reviews (Shopify App Store, Capterra, GetApp) repeatedly mention the same pain points. Go in with eyes open:

| Risk | What sellers report | Your protection |
|---|---|---|
| **Weight discrepancy charges** | Courier re-weighs higher; extra amount auto-debited if not disputed in 7 days; disputes take ~5–7+ days and are sometimes rejected | Enter packed box dimensions; photograph every package on a scale with dimensions visible; check the Weight Discrepancy tab daily; dispute within 7 days |
| **High RTO / fake 'customer refused'** | Undelivered COD orders cost double freight with zero revenue | COD confirmation via WhatsApp/IVR; NDR follow-up; block bad pincodes; prefer couriers with better delivery % in your regions |
| **Unexpected wallet deductions** | Charges appear days later (RTO, weight) | Reconcile passbook weekly against your order DB; download invoices (twice monthly) |
| **Support quality** | Slow ticket resolution at lower plans | Escalate with AWB + evidence in writing; Advanced/Pro plans get dedicated/priority support |
| **Lost / damaged parcels** | Claims can be slow | Use secure shipment/insurance for high-value items; keep packing video for expensive orders |
| **COD cash-flow lag** | D+8 working days ties up money | Budget 2 weeks of working capital, or use Early COD only when needed |
| **Platform dependency** | All orders run through one aggregator | Keep your order data in your own DB; know an alternative (e.g., NimbusPost, Shipway, iThink Logistics, or direct Delhivery) in case you need to switch |

## 10. Final verdict

| Question | Answer |
|---|---|
| **Is Shiprocket feasible for my website?** | Yes — for a new/small Indian D2C site it's one of the fastest ways to get pan-India delivery (19,000+ pincodes), COD and tracking without courier contracts. |

| Question | Answer |
|---|---|
| **How do they get paid?** | From your prepaid wallet: freight + COD fee + 18% GST per shipment, plus optional monthly plan and add-ons. |
| **How do I get paid?** | Prepaid: your payment gateway pays you directly. COD: courier → Shiprocket → your bank in ~D+8 working days (or D+2/3/4 with a fee). |
| **How does Shiprocket profit?** | Bulk-buy/resell spread on freight, COD fees, subscriptions, early-payout fees and value-added services. Core shipping is profitable; the company overall still reported a small net loss in FY26 due to new businesses. |
| **When is it NOT a good fit?** | Very low-priced items (< ₹300–₹400) with heavy COD; bulky/heavy items with poor volumetric ratio; very high volume where direct contracts are cheaper. |

## Go-live checklist

- ☐ KYC done, bank verified, pickup address name noted
- ☐ Wallet recharged; plan chosen per break-even table
- ☐ Packaging standardised; box dimensions saved as defaults
- ☐ Store connected (plugin) or API: auth, serviceability, create, AWB, pickup, label, tracking, cancel, webhooks
- ☐ Pincode check + delivery date on product/checkout page
- ☐ COD rules: minimum order value, COD fee, WhatsApp confirmation
- ☐ Shipping price on your site covers ‘cost per delivered order’ from section 5
- ☐ Weekly passbook reconciliation and daily weight-discrepancy check
- ☐ Test orders (prepaid + COD) shipped, tracked and remitted
